

500ml Trigger Spray Bottle HDPE 28mm Neck (part number)

Product Information

Specifications

| | |
|-------------------|------------|
| Output: | 500ml |
| Colours: | White |
| Screw Cap: | 28mm / 400 |
| Material: | HDPE |

Uses

| |
|----------------------|
| Pet Care. |
| Automotive Care. |
| Automotive Polish. |
| Toiletries. |
| Household Chemicals. |
| Cleaning Products. |
| Bike Wash. |
| Motocross Wash. |
| Hand Sanitiser. |
| Oils. |

■ Reusable ■ Recyclable

Tips

Make sure you have the right cap and bottle size

The standard Trigger Sprayers have a 28mm diameter cap with two different heights – Deep (28/410) and Shallow or Short (28/400). In the UK, the most common size for the retail market or Ready to Use (RTU) pack is the 28/410. The industrial/re-useable packs tend to have the 28/400 caps. These references correspond to the necks on the bottle so your bottle manufacturer can confirm what neck is on their bottle. If you have 400 cap on a 410 bottle neck there will be a gap under the cap. If you have a 410 cap on a 400 bottle neck, the pack will not seal on the gasket and it will leak.

Additional options

- Enhance your product with a foaming nozzle
- Spray further with a lance extension
- Spray directly from a 5 litre container with a long tube version
